DICOTYLEDONAE MAGNOLIDAE

* The Dicot (Magnolidae) herbarium of the Baudin expedition contains 28 specimens.

* Cited collectors are Guichenot (1 report) and Riedlé (10 reports).

* Origin of each specimen is mentioned. These places are : Timor (14 reports), Port Jackson (4 reports), Kangaroo Island (2 reports), Swan River (2 reports), west coast (2 reports), Barren Islands (1 report), d'Entrecasteaux Channel (1 report), New Holland (1 report), St Francis Island (1 report).

Each plant specimen has been photographed. Accompanying labels are numbered chronologically (label 1 being the oldest). Information provided for each specimen consists of : the plant name (i.e. most recent name according to labels), the geographical origin, the name of the collector (when possible), additional relevant information (under the heading 'Nota'), the specimens's reference number (barcode) assigned by the Paris Museum of Natural History (MNHN collection).

The collected specimens belong to 7 distinct families that were grouped into one digital herbarium (H16). Families are presented in alphabetical order. These are families Annonaceae (Ann), Aristolochiaceae (Ari), Lauraceae (Lau), Menispermaceae (Men), Piperaceae (Pip), Ranunculaceae (Ran), Viscaceae (Vis).

Identified and unidentified specimens are left in the family to which they were assigned. Species in each genus and genera in each family are sorted alphabetically. An index of genus names is given for all families.

Occurrence of type material : *Clematis microphylla* (Ran 4)
Amyema leschenaulti (Vis 2)

INDEX OF GENERA (Magnolidae)

Amyema	Vis 1-2
